How do you explain what SQL is to someone without a technical background, and how do you decide which details to include?

SQL administrators and technicians may spend a lot of time interacting with end users and teams who rely heavily on the databases. The applicant should feel comfortable explaining details of SQL and the way it relates to the end user's work. What to look for in an answer:

Clear process on explaining SQL to non-technical staff
Deep understanding of SQL concepts
Explanation of how they choose the most important parts of SQL to include

Example: "SQL stands for Structured Query Language. This language is how database administrators communicate with a database and manage its contents. For example, I use a particular string of commands and variables, called a query, to look up values in the database."

3. What are your career goals for Systems engineer?

What are Your Career Goals?
How do you plan to achieve these goals?

a. The reason of this question:

This question will test your ability and ambition to develop personal as well as professional goals for the future.

b. Levels of career goals:

You are not sure about your goals, then answer, I'm either not sure about my goals or I haven't focused much on my long-term personal goals.

You have goals, but very little relating to the current job:

For example, you have a goal to become the head of marketing department in the next 5 years.

Current job oriented career goals: For example, you are working as a sales manager, you goal is to become the area sales manager in the next 5 years, after that you will be the regional sales manager.
